PL-521 HORIZONTAL WRAP AROUND LABELING MACHINE

Machine Sub- Assemblies

Machine Dimensions

Machine Specification

Electricity

1. Voltage: 110V/220Vac
2. Frequency: 50Hz/60Hz
3. Phase: Single
4. Power Consumption: 760W

| | |
|----------------------|--|
| Conveyor Width | 110mm(4.33") |
| Speed Control | 8 Levels Selection |
| Conveyor Max Speed | 20M/Minute |
| Dispensing Max Speed | 40M/Minute |
| Labeling Head Driver | Step Motor Drive |
| Label Length | Min: 15mm (0.59') Max:300mm (11.81') |
| Label Reel Inner | 76mm (2.99') |
| Label Reel Outer | Max: 375mm (14.76') |
| Space Between Label | Min: 3mm (0.12') OR More |

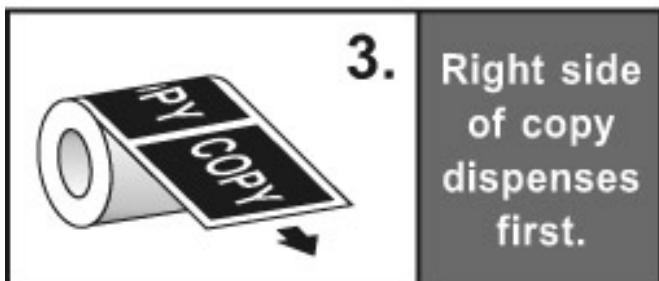

Machine Features

- The build-in instruction of the operation system is very easy and well documented. This system reduces the training time for the new operators who can immediately increase the production since anyone can learn to operate it within few minutes.
- The build-in Trouble shootings feature reduces the down time for system breakdown. Operator can easily follow the instruction on the screen to solve the problems.
- User-friendly design for setting label length, any different size of label can be easily detect with a gentle touch. This unique setting can assure the accuracy of each label length, so that it won't be affected by the mismatch of length from previous memory setting (Since the space between each label could have a slight difference, the error will accumulate during each labeling process). Beside that, the set up process is very simple for new operator.
- With the function of label counter, you can easily monitor the current status of labeled quantity from the control screen.
- With the batch counter, you can preset the total labeling quantity. The machine will auto-stop when it reaches the preset quantity. This feature is useful for quantity management in the production line.
- With position set, you can easily adjust the position of the label by setting a delay time to make some adjustment on the label position.
- Missing label auto-stop system can avoid any missing the label on products for manufacturers to easily do their quality control during the production process.
- For different printing speed, printer timer can be set for different demands to assure the clarity of the each print. (The printer is optional. All the control circuit for printer is preset for future installation in all standard machines).
- Eight speed selection for different working environment to meet the requirement of different production lines.
- Automatic start function reduces the setup time by simply providing electricity, the system and it will start operate by itself in the production line.
- The conveyor has a separator wheel to space each bottle apart from each other and ensure the correct position for labeling. By adjusting the guide rail, different size of bottles can be labeled (for production rate of 200 ~ 400 bottles per minute, use in-feed screw for fast and stable operation.)
- Foot-stand designed with square-shapes for small footprint and castors for mobility. It is ready to operate as a stand-alone machine or connected with other in-line machine for flexibility
- 30 memory slots for convenient data retrieval and loading.

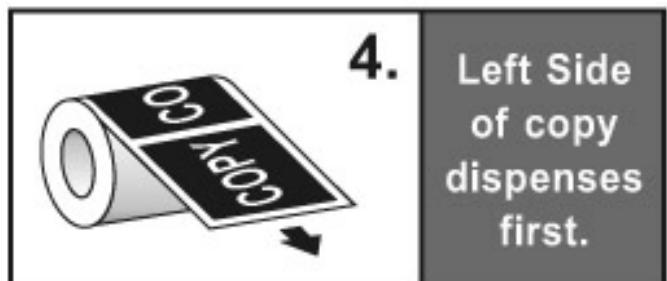

Specification of Label Reel

- Base Paper Translucent
- Reel Inner Diameter: 76 mm
- Reel Outer Diameter: 370 mm
- Interval of Label Min. 3 mm (between label)
- Width of Base Paper Label Width + 4 mm
- Width of Label 150 H Label Head – 10 ~ 150 mm
 - ◆ 200 H Label Head – 10 ~ 200 mm
- Length of Label 15 ~ 300 mm (Standard)

LEFT SIDE

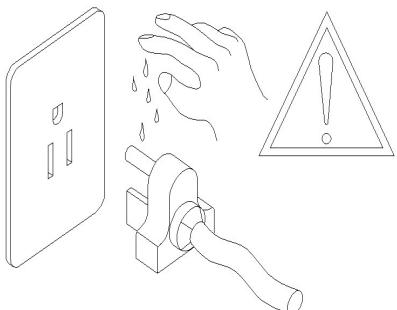

RIGHT SIDE

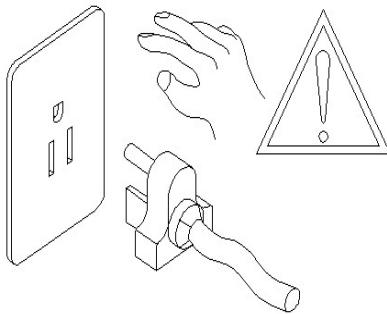

Standard

Safety Regulations

1. Make sure the hands are dry before to put on the plug. Especially, in the food industries or in wet working environment

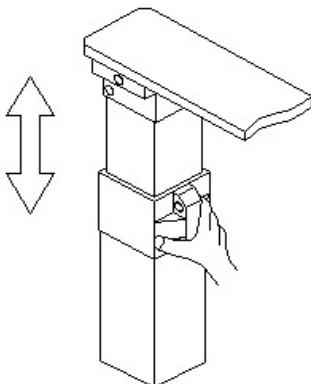

Danger

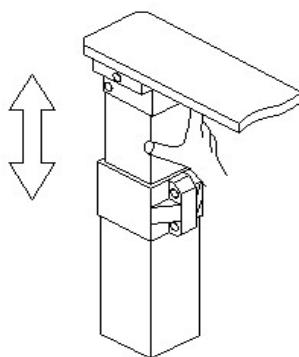

Safe

2. Do not put hands or fingers on the inner tube when adjust the height of the foot stand. Immediately lift up the conveyor if hands or fingers are trapped

Safe

Danger

3. When the machine is running please beware of your clothes, hair, gloves or anything, which is easy caught on the conveyor or running roller that may cause injury.
4. Do not touch the conveyor, roller or paper receive axis when machine is running

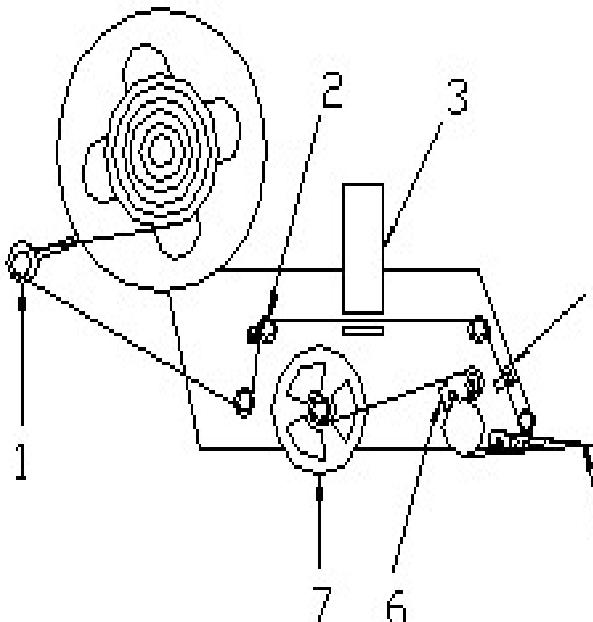

Inspection before Operation

1. Make sure the power is connected to right power source
2. Machine adjusted to product specification range
3. The height of label applicator adjusted in appropriate position
4. The guide rails adjusted to according the width of the product
5. Object sensor adjusted in right position
6. Label sensor adjusted in proper setting
7. Conveyor is clear with no extra object
8. Separator wheel adjusted to accommodate the width of the product

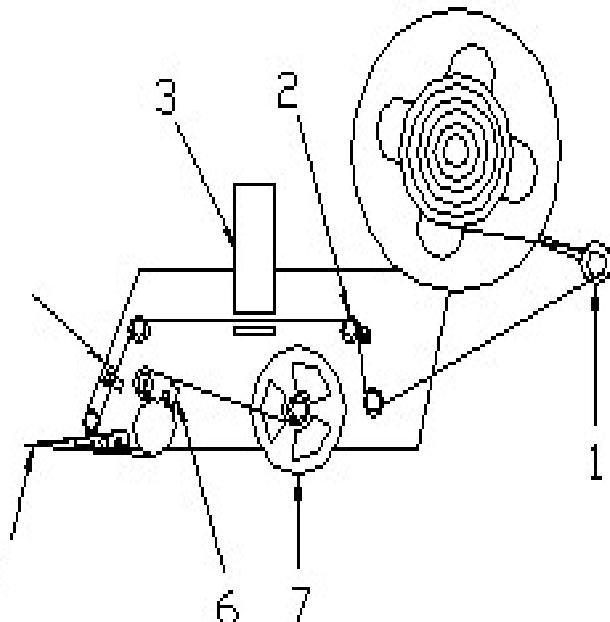

Label Applicator

To put the labels in the label applicator, kindly follow the following instructions with diagrams:

Right applicator

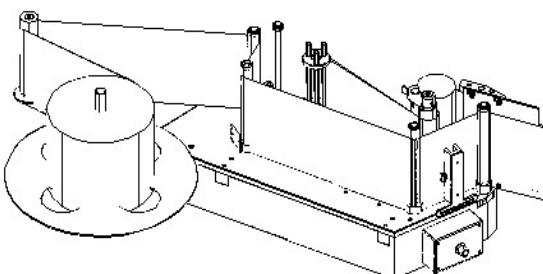

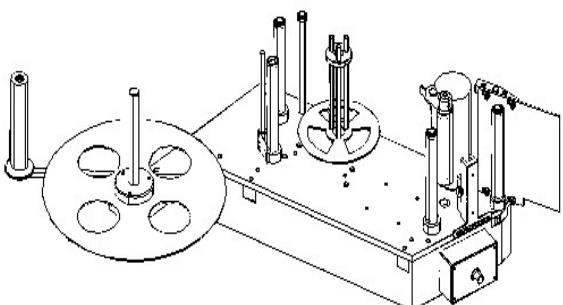

Left applicator

Standard

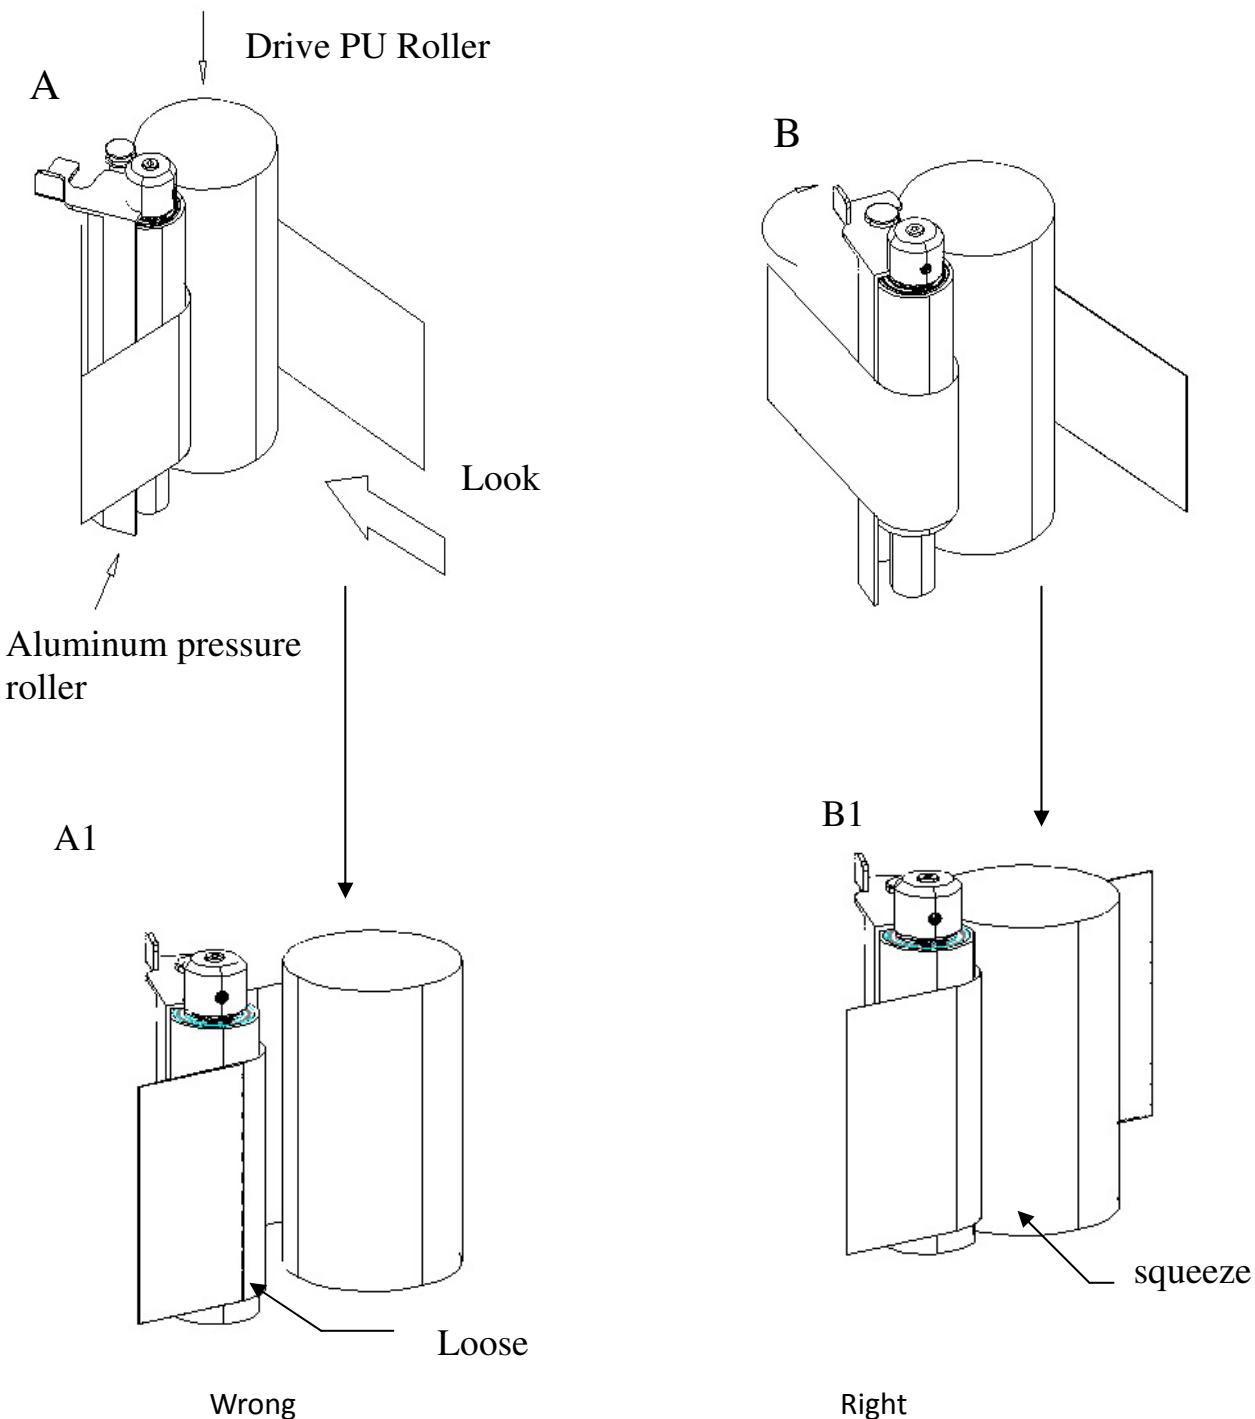

- 1 Put the roll of label on the tray and pass it through the tension roller so it will not spin out of control.
- 2 Fasten the tension clip after passing through this point to ensure tension on the label strip and avoid loose labels.
- 3 If a printer is installed pass the labels through the slit to print the labels.
- 4 It is important for the labels to pass through the label sensor slit for it detects the labels and controls the dispensing of labels.
- 5 The dispensing plates peels the label from the base paper for application on the objects.

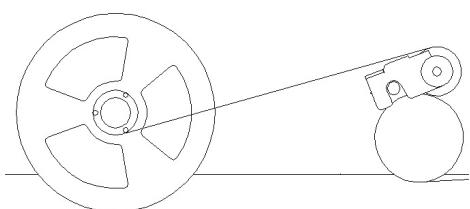

PACK LEADER

6 The drive PU rubber roller pulls the base paper to position the labels. The aluminum pressure roller must be locked in place with the PU roller in order to squeeze the paper and pull effectively. See C.

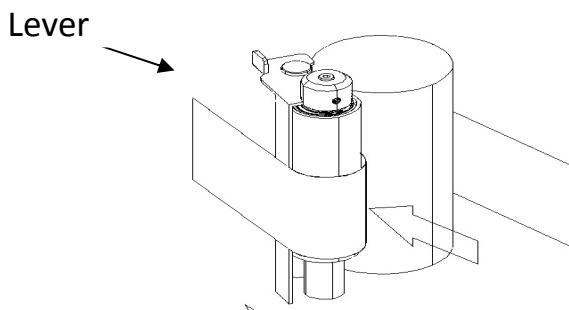

7 Wind the base paper around the 3 pillars
and place the cap on top for the
collection of the base paper.
Wind it up until there is some tension on.
the paper for proper pickup

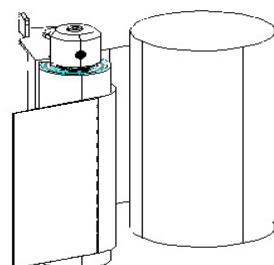

Adjusting Drive PU & Aluminum Roller

Step 1. Turn on the power. Then turn the lever to make the aluminum roller in contact with the drive PU roller

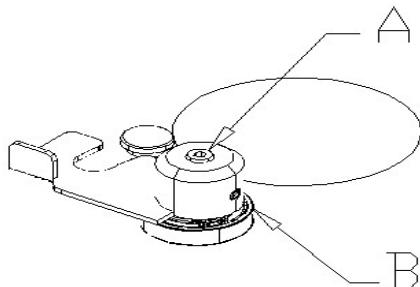

Step 2. Check the in between of the drive PU roller and the aluminum roller whether intact tightly or not (try to hold and rotate aluminum roller) if intact tightly, proceed to step 4, if not process to step 3

Step 3. If you see the rollers were not intact tightly, proceed to step 6

Step 4. To turn the aluminum pressure roller by hands. Then condition is all right when the roller does not turn. Proceed to step 5 when roller is turned

Step 5. When the lever is locked into the proper position, check if the drive PU roller is moving along with the aluminum roller. If the contact is very tight to the point the drive PU roller is not vertical, pull back the lever a little bit until the drive PU roller is vertical and the aluminum roller is touching the surface of the PU roller. Then loosen the A and B screws and turn the lever to the proper lock position. Tighten the A & B screws.

Step 6. Loosen A & B then pull the lever away from the fixed shaft. Tighten the A & B screws. Lock the lever and check if the aluminum roller and the drive PU roller are pressed together correctly. If not repeat this step again. If too tight see step 5.

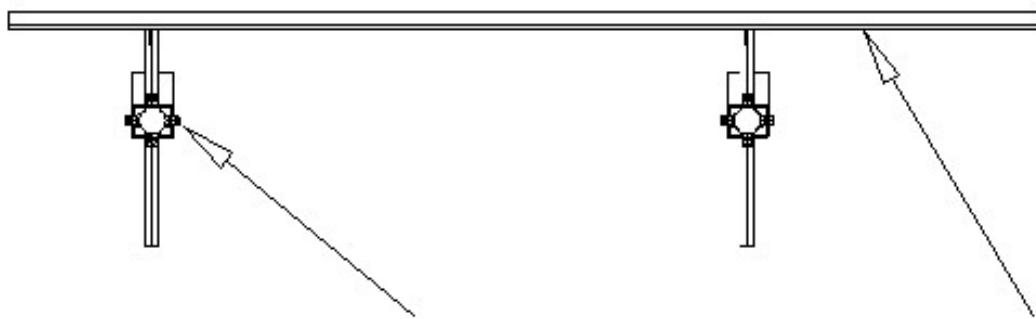

Warning

If the aluminum roller is not tightly pressed against the drive PU roller, the labeling will be inaccurate. Inaccurate label position causes inaccurate labeling.

If the aluminum roller is pressed too tight, it will cause the drive PU roller to wear and crack.

Guide Rail

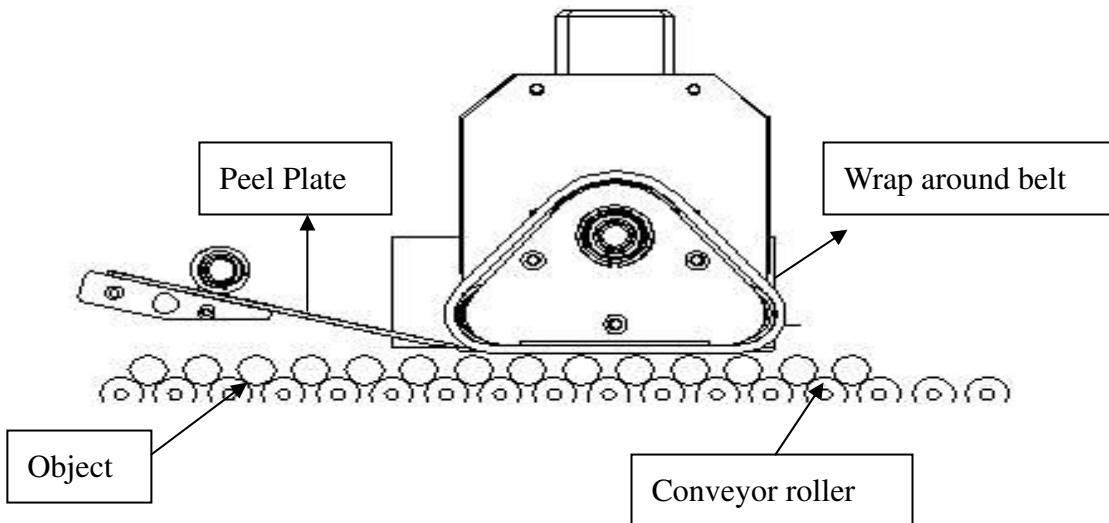

Guide Rail: To guide the products in the right position or direction

Adjustment lock

Guide rail

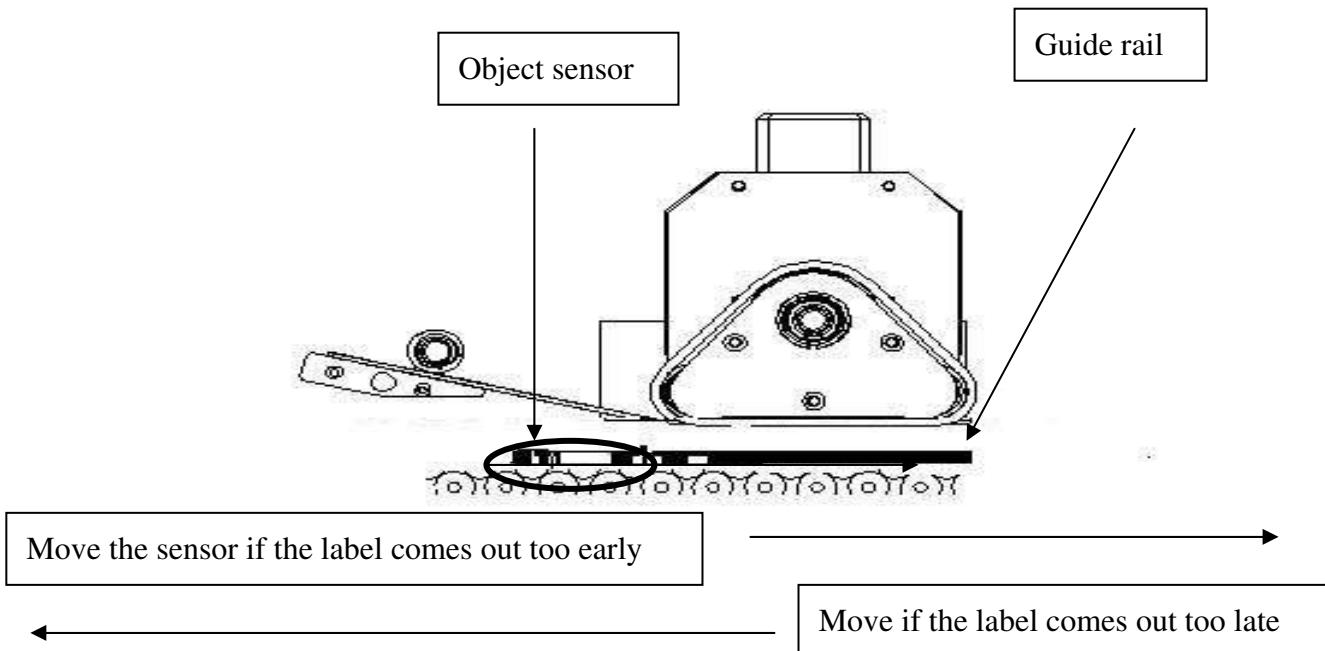

Position of Object Sensor

The wrap belt must exert enough pressure to press on the label on the object. But must not break the bottles when pass through.

The object sensor that is located on the lower part of the guide rails sense the object to trigger the label applicator. If the sensor is not able to sense the object, please adjust the amplifier located on the end of the fiber optic cable. The red LED must switch on/off when an object is detected.

If label is dispensed too early, please move the sensor to the right and vice versa.

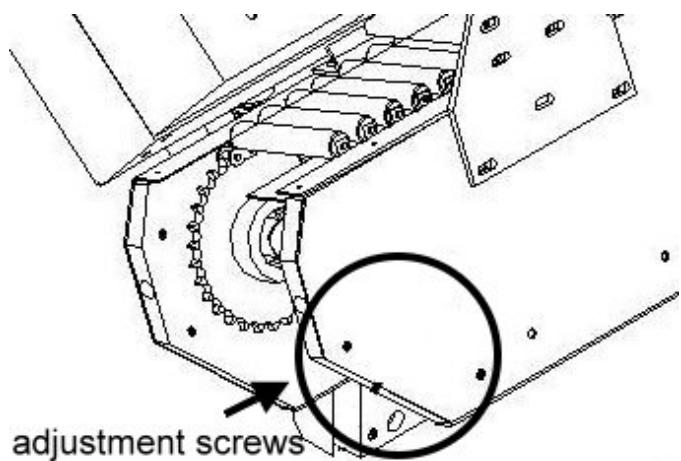

Parts Adjustments

1. Conveyor Adjustment:

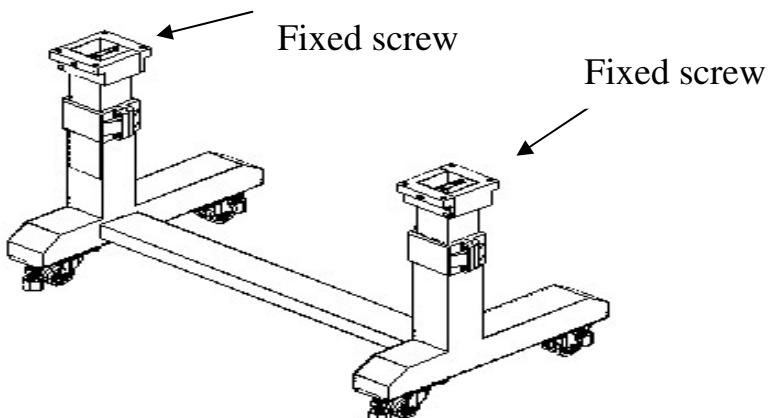

To adjust the tightness of the conveyor belt, loosen the two nuts on the screws.

Turn CCW to loosen and CW to tighten. Make sure the conveyor is centered for it will be noisy if not centered.

2. Conveyor height adjustment:

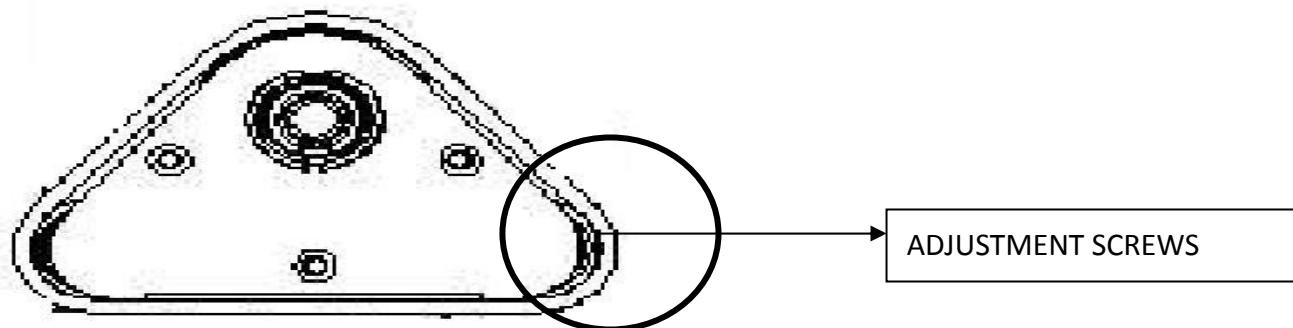

Loosen the fixed screws, adjust the conveyor to the appropriate height and tighten the screw again.

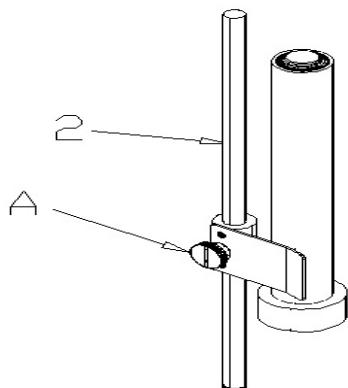

PACK LEADER

3. Wrap around belt adjustment: To adjust the tightness and centering the belt, adjust the screw A. When adjusting, use only small increments and let the belt run for a while to determine the final position. A belt that is not centered will slip up or down.

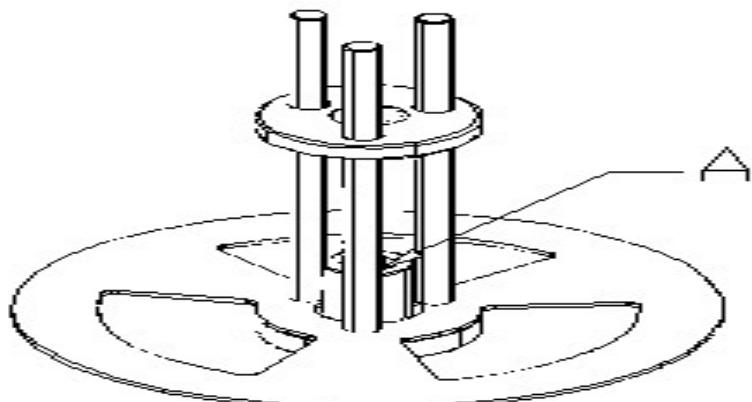

4. Paper press piece adjustment; First, loosen screw (A) turn the rod (2) CCW and hold it. Use your other hand to tighten screw A and then release it.

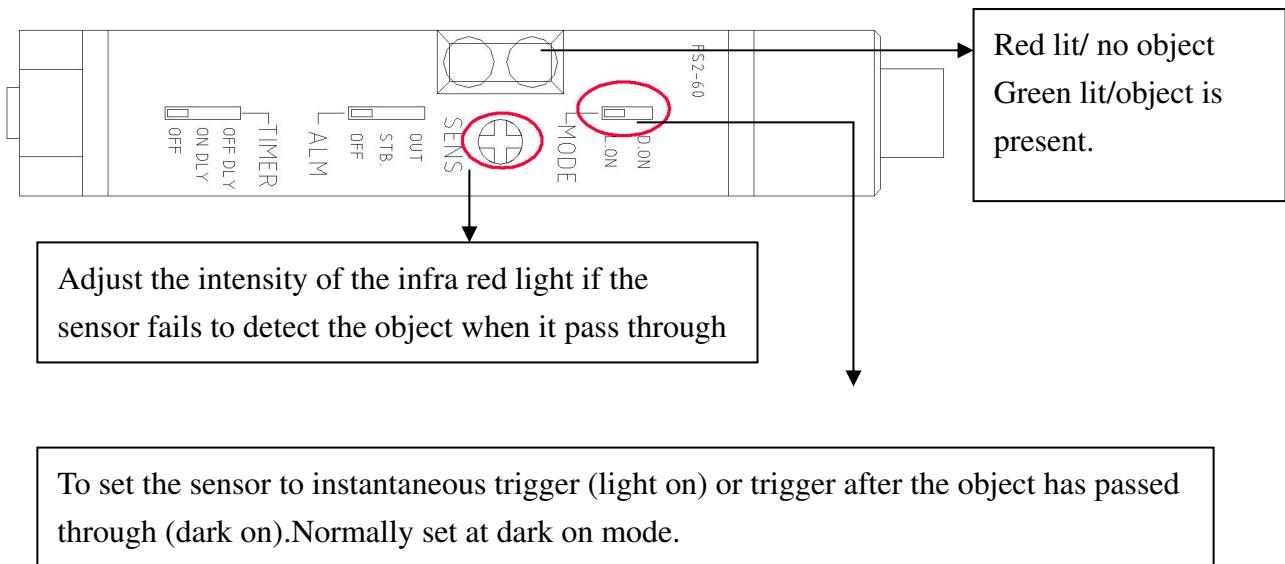

5. Base paper collector adjustment;

If the base paper collector is not able to collect the paper or the paper is very tight, adjust the screw in small increments at the center of the main shaft. Check if the base paper collector is not loose nor too tight.

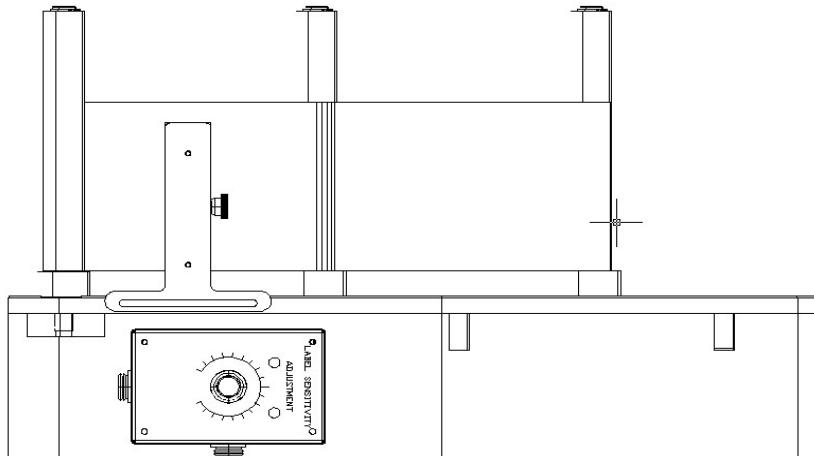

6. OBJECT SENSOR

The object sensor is a fiber optic infra-red sensor use to detect the presence of bottle on the labeling zone. If the sensor is not able to detect a bottle, adjust the intensity of the amplifier until the sensor is able to trigger the applicator to apply a label.

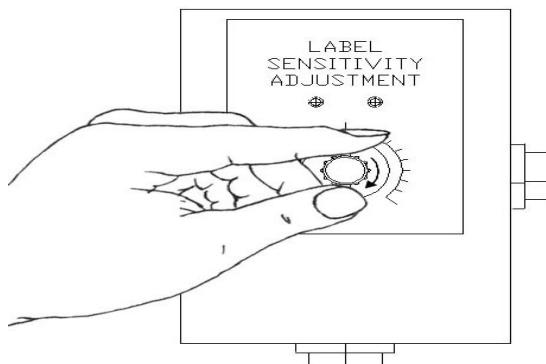

Label Sensor Position

1. Please follow the direction of diagram to install the label sensor
2. Kindly place the label through the detect point of label sensor
3. Adjust the sensitivity of label sensor to the appropriate position after the label is passed through the label sensor

Sensitivity Adjust of Label Sensor

1. Move the base paper into label sensor slit. The two LEDs (green & Red) on control box will light up when the label sensor responds to base paper. If indicator lights did not light up, please adjust the adjustment of the control box clockwise just enough that the two LEDs lights up.
2. Move the label to the slit of the label sensor; the lights on the control box shall be off. If lights did not turn off, please adjust the adjustment of the control box to counter clockwise just enough until the 2 lights turn off
3. Test the sensitivity of label sensor; The LEDs will light up when the label sensor responds on base paper, and lights will go off when the label sensor responds on label.
4. Please do not adjust the adjustment of the control box after setting the sensitivity of label sensor
5. If the indicate lights (green & red) twinkle unusually during labeling, please re-adjust the label sensor

Machine Operation

Please follow the operation steps and instruction

- 1-1. Plug-in the appropriate power supply voltage
- 1-2. Turn off the power (Turn on the emergency stop switch if in "off" condition)

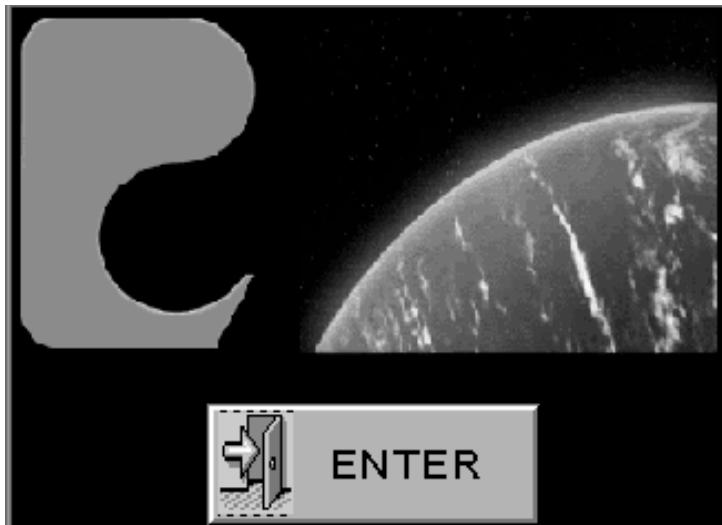

Diagram 1

- 1-3. The display will show as diagram 1.
- 1-4. Press "Enter" to get into next diagram or wait for 3 seconds

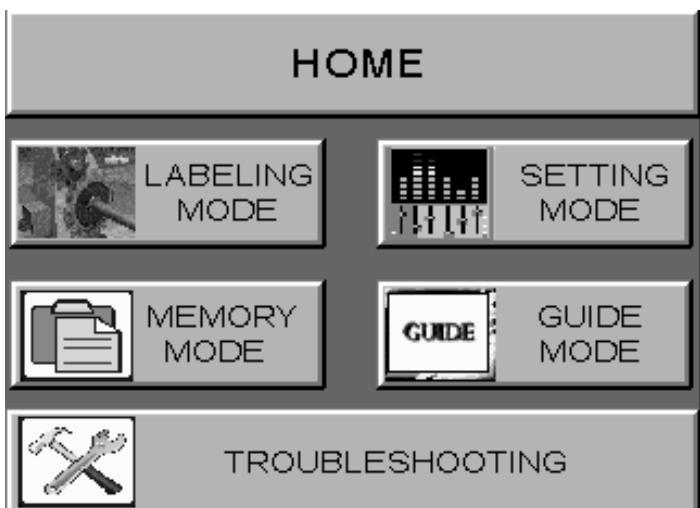

Diagram 2

- 2-1. Press "Guide Mode" for showing machine operation instruction
- 2-2. Press "Setting Mode" for set up machine information and speed
- 2-3. Press "Memory Mode" for memory setup.
- 2-4. Press "Labeling Mode" to enter diagram 3 or wait 5 seconds for next diagram

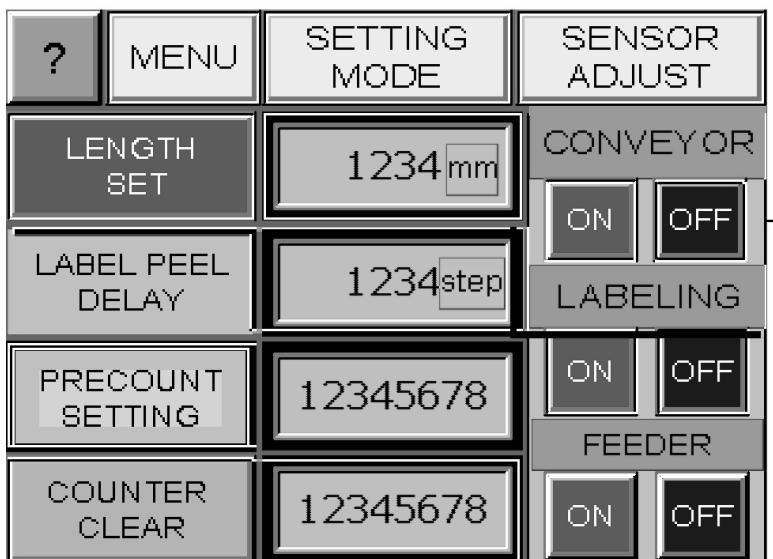

Diagram 3

- 3-1 Please keep pressing “length set” icon until the appropriate label length is registered. The number shows on display is label length set.
- 3-2, On the other hand, label length could be set by the numerical keypad next to the “length set” button;
- 3-3. Turn ‘CONVEYOR’ and “LABEL” both ON to start labeling process after labeling length set.
※: When pressing the label length set icon the label head will slowly pull the label until the finger is released. This icon will confirm the label length by showing the length. To reconfirm, check the number must not be 0. After checking, turn on the conveyor and it can start labeling. If the detached label is too long or too short, press the number icon and a keypad will appear. Using this keypad the length and position of the label can be changed to adjust the proper position of the labels. It is important to turn off the conveyor first before keying in the new settings.
- 3-4. Inspect the label is in appropriate position on object. If not, adjusting the object sensor position or press “LABEL PEEL DELAY” (when label come-out too early) for appropriate dispense timing.
※ : If the data shown on the screen is 0 this means the original position. Adding numbers will delay the dispenser and so it will apply the label a bit to the left
- 3-5. Regarding the “precount setting”, input the required number of product need to labeled. The conveyor will stop and the counter will reset to zero automatically when the number of label is reached.
- 3-6. Turn ON the “Conveyor” to continue labeling
- 3-7. Turn Feeder ON if product will be loaded by feeder. (Option)
- 3-7. Press “Trouble Shooting” button if you have has some problems
- 3-8. Press “Setting Mode” button to set up speed of conveyor, Missing label set, and speed of printer.

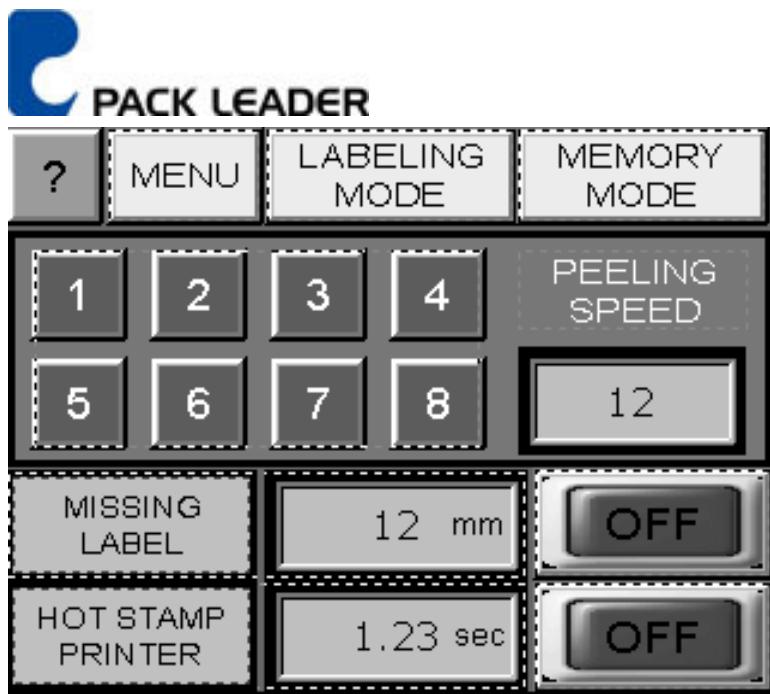

Diagram 4

4-2. Speed selection contains 8 levels of labeling speed.

4-3. Key in value in “Missing Label” for the sensor to detect missing label.

4-4. Turn ON the “Missing label” after key-in of the value in the Missing label set, await the diagram shows on display then function will start

※: If the missing label set is on, it must not indicate 0. Normally it is set at about 80% of the label length. The machine will stop when there is a missing label on the label roll.

4-5. For the printer speed set icon, turn ON only when using printer.

Press “HOT STAMP PRINTER” icon for setting the required printing speed.

※: Printer speed setting, if the setting is long the speed will be slow. It depends on the transfer speed the ribbon can tolerate. In setting the printing speed timing, the main consideration is the ribbon’s transfer speed.

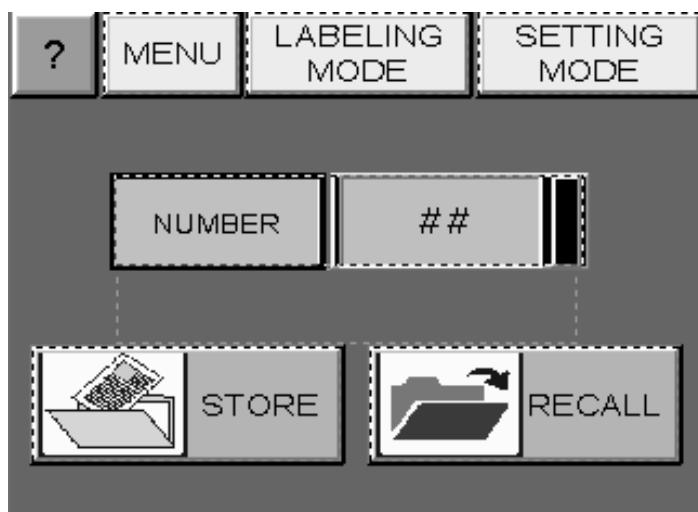

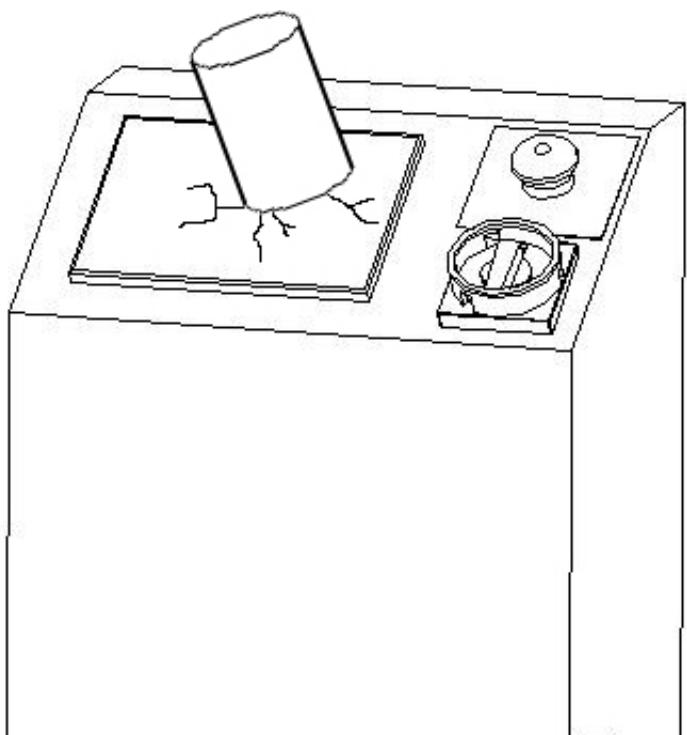

Diagram 5

5.1 Memory store and read function; to save the present setting to the memory slots, go to the main menu and select memory. Press save and assign a valid memory slot 0-30 to save the data. To recall press read and the slot number, this will automatically load the data to the PLC.

- Label length, position delay, batch counter/on/off, printer speed/on/off, missing label on/off, and conveyor speed are saved and loaded as a set of parameters in each slot of memory.

Touch Screen

- Do not bump or press heavily the screen
- Please lightly press any point inside the screen to key-in input data
- Please lightly press bottom with the finger to select
- Please use soft cleaner or wet cloth to clean the surface of the touch screen
- Operators are not advised to open the control box or power box to change any spare part. If so, we do not have any responsibility on any damage or injuries.

Danger

Trouble Shooting

PROBLEM 1: LABEL LENGTH CAN NOT BE SET

A. LABEL SENSOR WAS NOT ADJUSTED PROPERLY

1. Inspect the condition of label sensor. If the two lights (green & red) are in not set properly, please refer to "Sensitivity adjusting instruction of label sensor"
2. If label length still cannot be set, kindly replace the label sensor or sensor box. (Or verify the label sensor signal input to control P.C.B wire no. 41.)

B. STEPPING MOTOR DOES NOT WORK

1. Inspect the connection wire is connected or not. If the connection wire is not connected, please connect it and re-set the labeling applicator.
2. If it is not the problem of connection wire, please notify maintenance people.(to verify the clock pulse of step motor, check wire no.14)

PROBLEM 2: MORE THAN ONE LABEL IS DISPENSED AT A TIME

A. SENSITIVITY OF LABEL SENSOR

1. The sensitivity of label sensor is too weak; as a result, sensor cannot (or sometime cannot) respond on label.
2. Kindly re-set the sensitivity of label sensor. (refer to sensitivity adjusting instruction of label sensor)

B. LABEL LENGTH WAS SET TOO LONG

1. Please reset the label length

PROBLEM 3: LABEL WON'T DISPENSE

- A. Inspect the object sensor has responds on product. If not, adjusting the sensitivity of object sensor until the label is coming out. If label still won't dispense by adjusting object sensor, inspect the wire or replace a new one.
- B. The "labeling" icon of Labeling Set was not turned on yet. Please Turn "On" the labeling icon of labeling set.
- C. The fuse of the stepper motor driver is burned out. Replace a new fuse.
- D. The wire of stepping motor or motor driver is damaged. Please notify maintenance people

PROBLEM 4: LABEL IS SLANTING NOT ON THE RIGHT POSITION

- A. Bottle is not even.
- B. Label is obliquely placed on base paper when label are made.
- C. The slanting occurred when labeling.

Note 1: To improve the bottle and label if problem found is A & B.

Note 2: To adjusting applicator to appropriate position if problem found is C.

PROBLEM 5: NO SCREEN DISPLAY

- A. Check whether power was turned on or not.
- B. Check whether the connection wire was took off or damaged.
- C. Check whether the fuse was burned or not

Trouble Shooting

PROBLEM 6: LABEL WILL NOT STICK ON THE PRODUCT

A. LABEL COMES OUT TOO LATE

Slowly adjust the object sensor forward to dispensing plate until label is coming out on time.

B. LABEL DOES NOT COME OUT SMOOTHLY

Check whether the PU rubber (with a lock) in the label applicator is locked or not. If not, please kindly lock it. If labels still come out not smoothly

When locked, check with the PU rubber whether lock tightly by turning the PU rubber. If not, kindly loosen the screw in the lock of the PU rubber and adjust backward slowly until it was tight enough when you lock it again.

C. STEPPING MOTOR

Check whether stepping motor was running with noise. If so, please check the connecting wire, belt and other spare part to see if they are damaged.

Kindly replace new stepping motor if defective.

D. PRODUCT & LABEL

Check whether product surface is too wet or slippery or label has no gum.

PROBLEM 7: WRINKLES OR BUBBLE OCCUR WHEN LABELED

A. LABEL COMES OUT TOO EARLY

1. Kindly move object sensor backward to appropriate position to test labeling. If label still comes out too early, move object sensor backward again until label comes out on appropriate time.

2. Could set the labeling delay in LABELING SET.

B. THE POSITION OF LABEL IS NOT ACCURATE

1. Check whether the front of dispensing plate is slanting.

2. The label sensor is in an unusual condition. Please inspect the label sensor (control box) or replace new one.

3. The space between two labels is not even

C. BOTTLE CONDITION

1. Surface of product is not even

D. ROLLER PRESSURE PLATE

1. Roller pressure is too tight

PROBLEM 8: CONVEYOR DOES NOT WORK

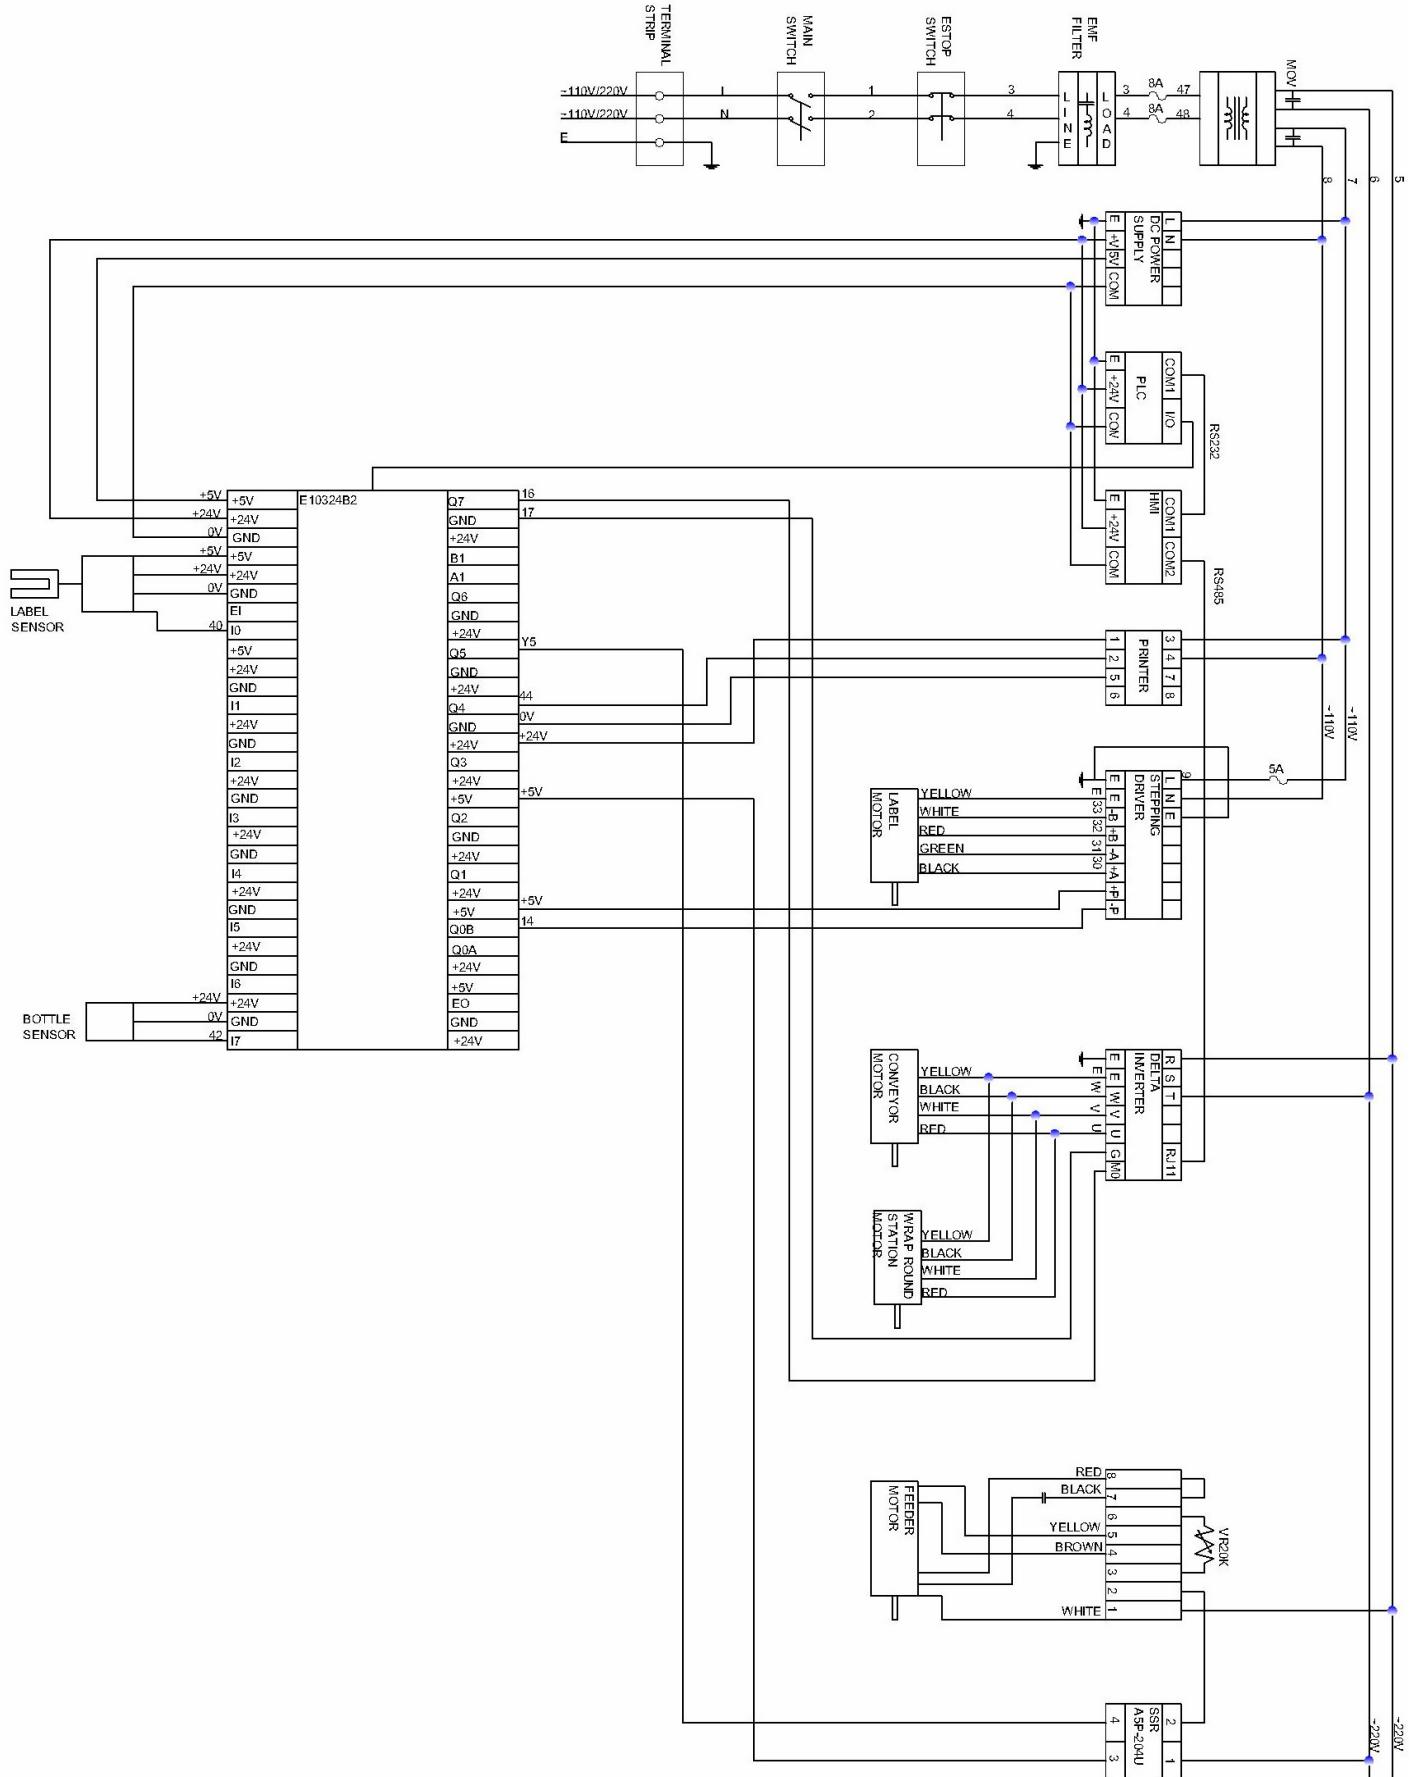

A. WILL NOT RESPOND ON TOUCH SCREEN

1. Please re-start the machine.

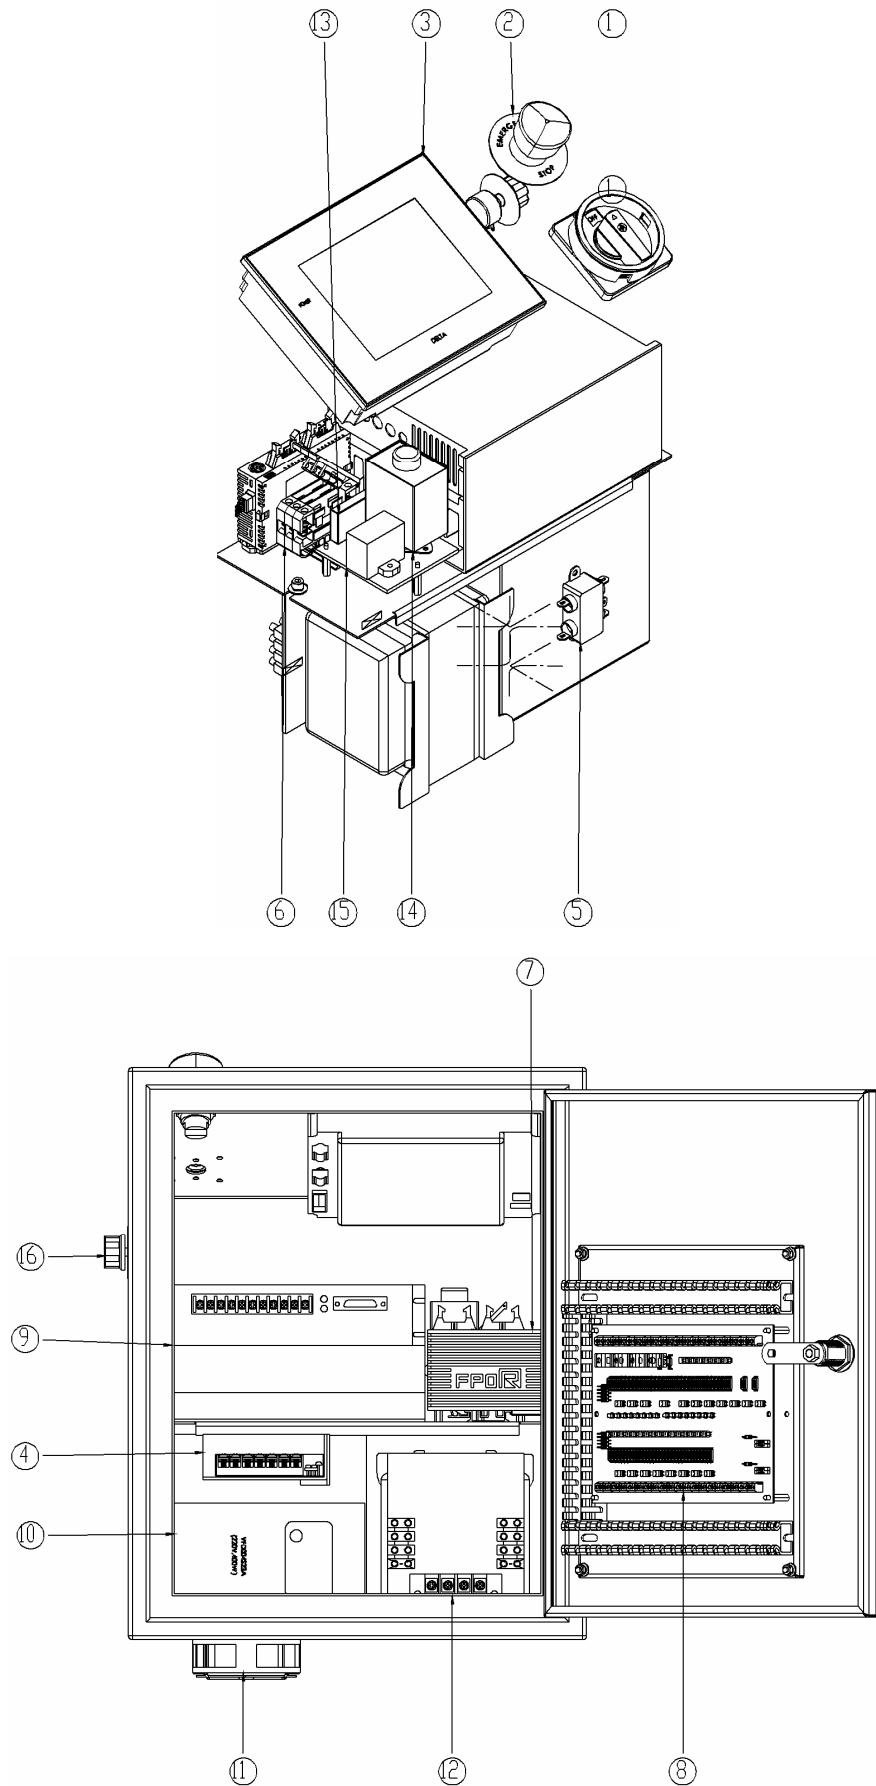

B. CONVEYOR MOTOR

2. Gearwheel belt took off or wire damaged.

| 31 | Guide shaft | FH1-PL521-032 | 4 | |
| 32 | Socket Head Cap Screws | XNJW-M520 | 4 | |

Right Side Guide Plate

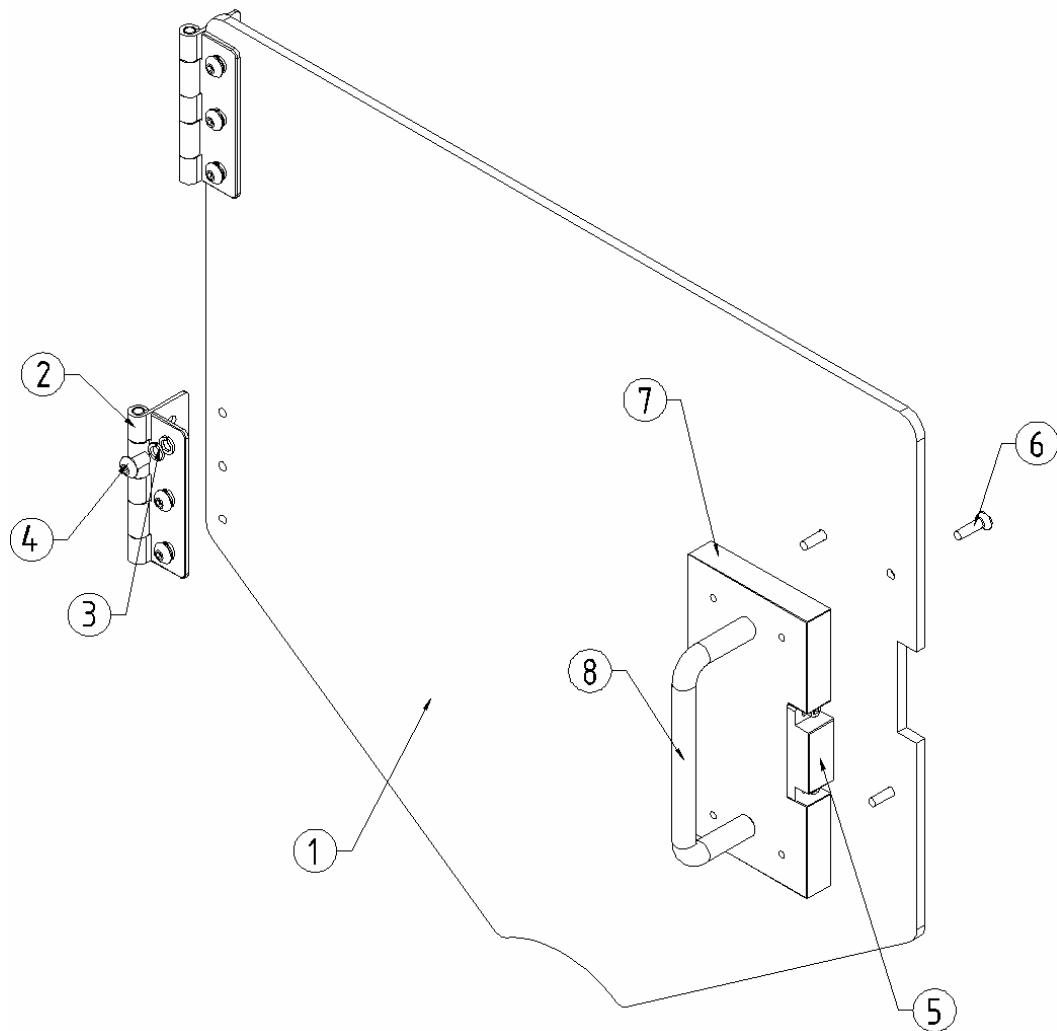

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|----|----------------------------------|---------------|------|------|
| 1 | Right guide plate | FH1-PL521-012 | 1 | |
| 2 | Top plate | FH1-PL521-010 | 1 | |
| 3 | Washer | XNQC-M6 | 4 | |
| 4 | Socket Head Cap Screws | XNJW-M620 | 4 | |
| 5 | Oscillating base | FH1-PL521-011 | 2 | |
| 6 | Spacing shaft | FH1-PL521-007 | 4 | |
| 7 | Hexagon socket button head screw | XN1W-M616 | 4 | |

Left Side Guide Plate

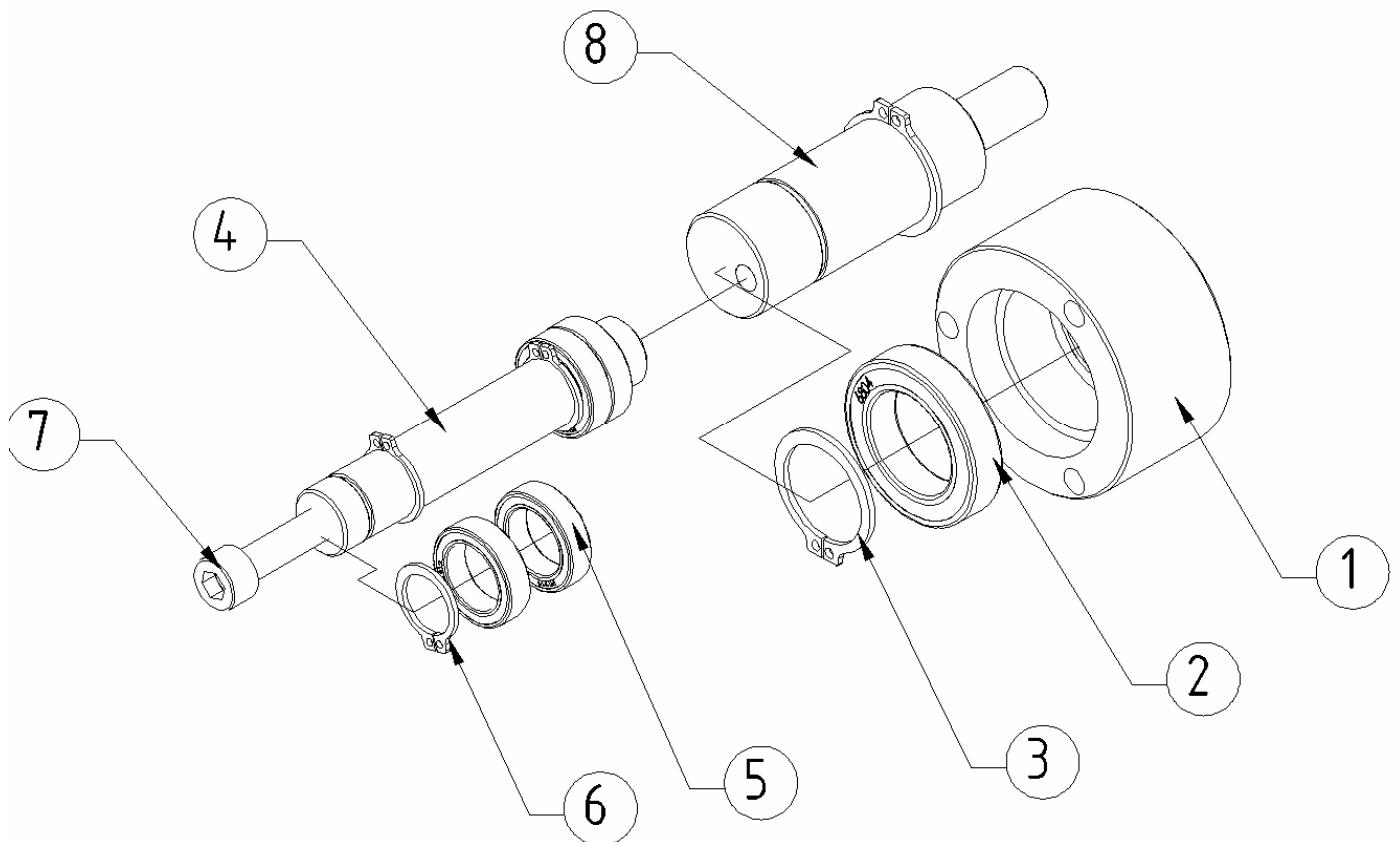

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|-----------|----------------------------------|-----------------|-------------|-------------|
| 1 | Left guide plate | FH1-PL521-023B | 1 | |
| 2 | Top plate | FH1-PL521-010 | 1 | |
| 3 | Washer | XNQC-M6 | 4 | |
| 4 | Socket Head Cap Screws | XNJW-M620 | 4 | |
| 5 | Oscillating base | FH1-PL521-011 | 2 | |
| 6 | Spacing shaft | FH1-PL521-007 | 4 | |
| 7 | Hexagon socket button head screw | XN1W-M616 | 4 | |

Door Set

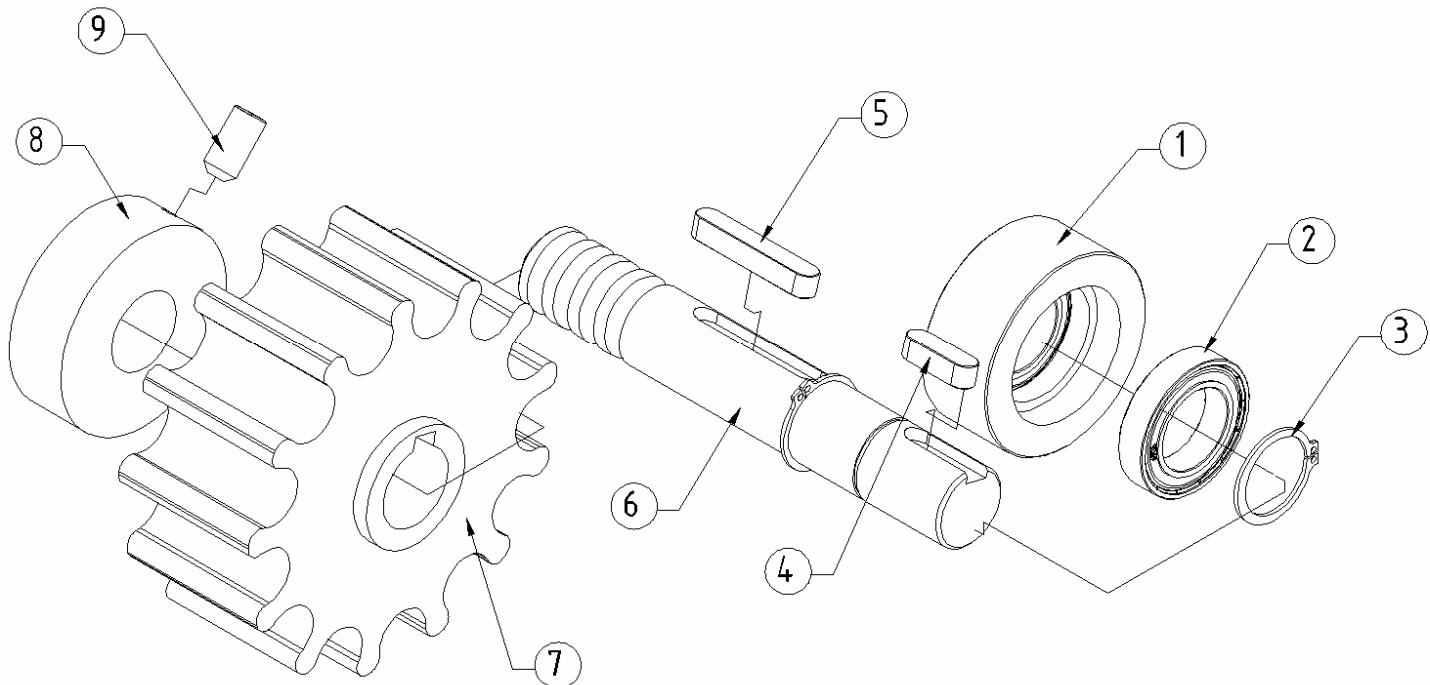

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|----|----------------------------------|------------------|------|------|
| 1 | Transparent door panel | FH1-PL521-019D | 1 | |
| 2 | Hinge | 51RX-AS1940 | 2 | |
| 3 | Spring washer M5 | | 12 | |
| 4 | Hexagon socket button head screw | XN1M-M510 | 6 | |
| 5 | Magnet base | 51G1-002 | 1 | |
| 6 | Pan head screws Hexagon | XNAW-M4-16 | 4 | |
| 7 | Handle base | FH1-PL521-021C | 1 | |
| 8 | Handle | 51WR-127010100CR | 1 | |

Swing Roller Assembly

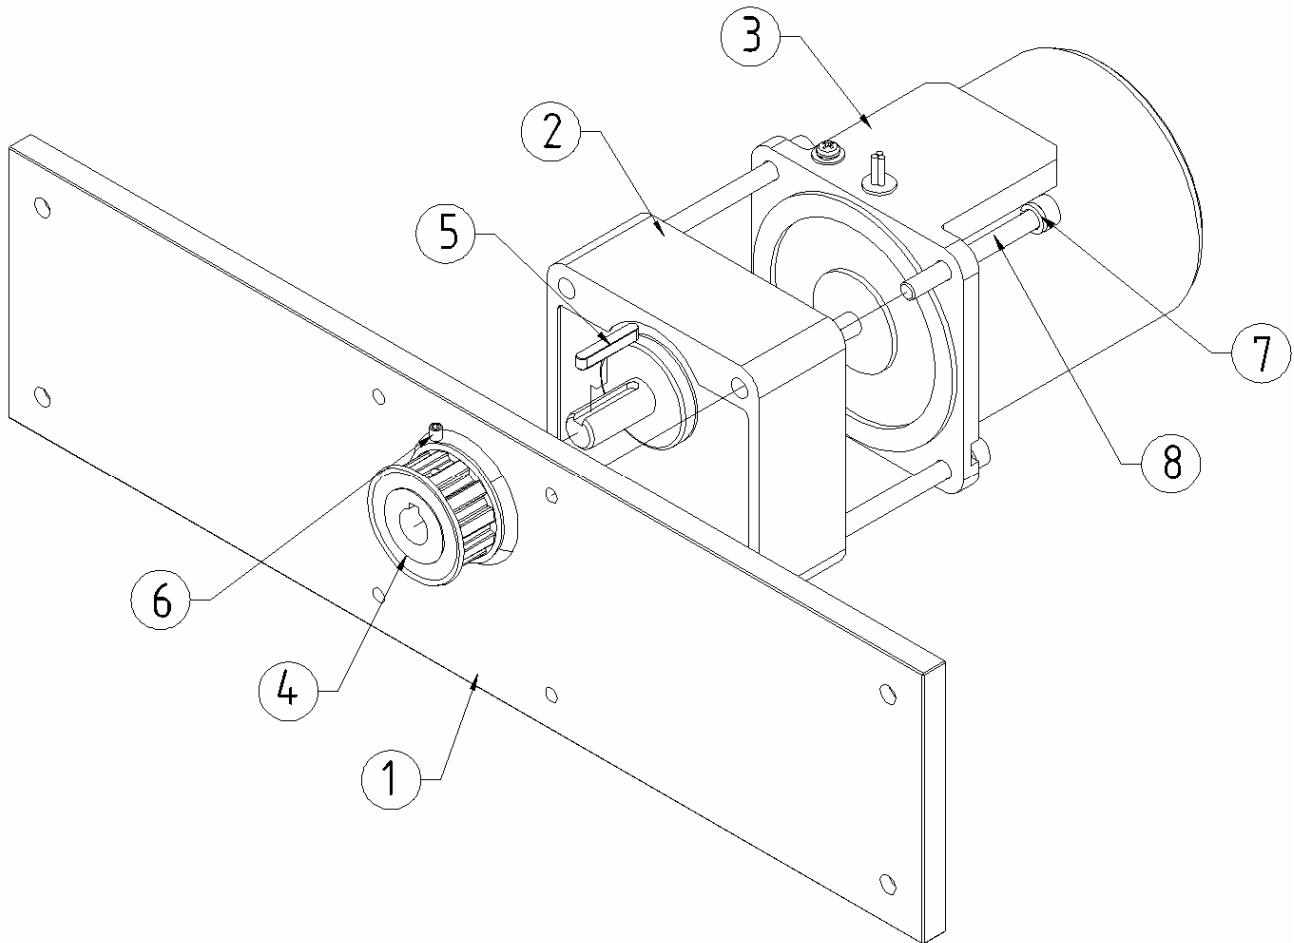

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|----|------------------------|---------------|------|------|
| 1 | swing house bearing | FH1-PL521-003 | 1 | |
| 2 | Bearing 6804zz | 5TGH-6804ZZ | 2 | |
| 3 | S-ring S20 | DCSV-S20 | 2 | |
| 4 | swing roller shaft | FH1-PL521-009 | 1 | |
| 5 | Bearing | 5T5W-RI1212 | 4 | |
| 6 | S-ring S12 | DCSV-S12 | 4 | |
| 7 | Socket Head Cap Screws | XNJW-M690 | 1 | |
| 8 | swing shaft | FH1-PL521-008 | 1 | |

Star Wheel Assembly

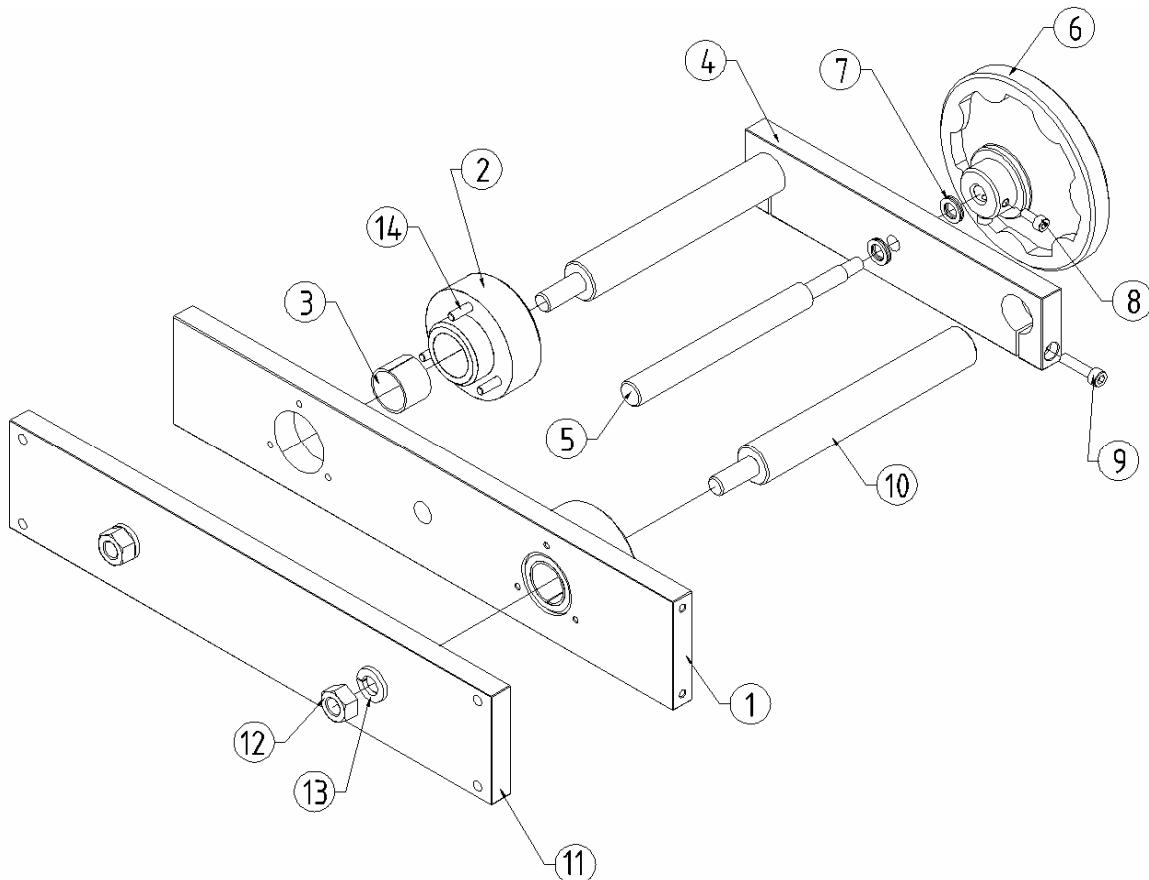

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|----|---------------------------|---------------------------------------|------|------|
| 1 | Star wheel house bearing | FH1-PL521-005 | 1 | |
| 2 | Bearing 6905zz | 5TGH-6905zz | 2 | |
| 3 | S-ring S25 | DCSV-S25 | 2 | |
| 4 | Double head round keys | RGM-8725 | 1 | |
| 5 | Double head round keys | RGM-8745 | 1 | |
| 6 | Star wheel shaft | FH1-PL521-014 | 1 | |
| 7 | Star wheel | Part # various depend on product size | 1 | |
| 8 | Star wheel location block | FH1-PL521-015 | 1 | |
| 9 | Socket Set Screw | XN5Z-M1020 | 1 | |

Feeder Motor Assembly

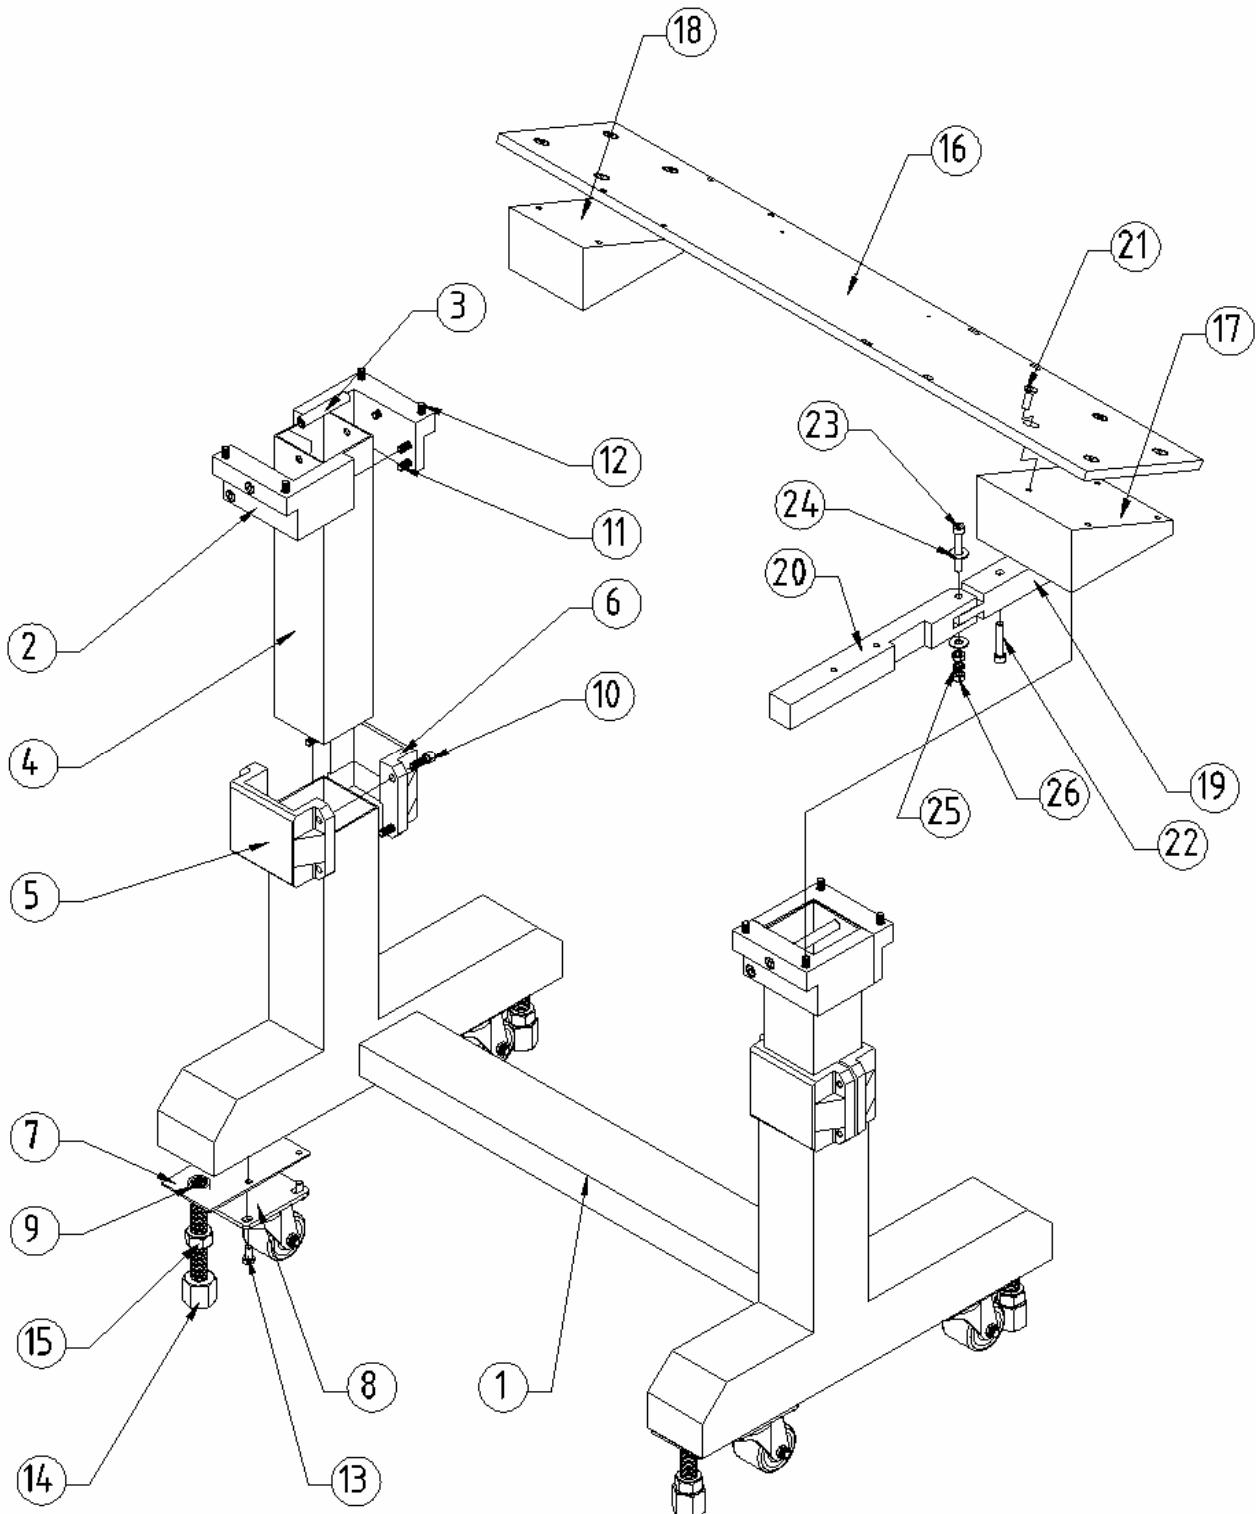

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|----|------------------------|------------------|------|------|
| 1 | Motor fixing base | FH1-PL521-002 | 1 | |
| 2 | Gear box MX9G25B | A2RG-MX9G25B | 1 | |
| 3 | Motor M9IX40GV4GG | A2EU-M9IX40GV4GG | 1 | |
| 4 | Pulley 12L | T2Q2X-12L050124 | 1 | |
| 5 | Double head round keys | RGM-4425 | 1 | |
| 6 | Socket Set Screw | XN5Z-M45 | 1 | |
| 7 | Spring washer | 2FW0-M6 | 4 | |
| 8 | Socket Head Cap Screws | XNJW-M655 | 4 | |

Feeder Adjustment Assembly

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|----|-----------------------------|-----------------|------|------|
| 1 | Adjusting base | FH1-PL521-026C | 1 | |
| 2 | Adjusting base sleeve | FH1-PL521-027 | 2 | |
| 3 | Bearing | 5TDU-LBF2520 | 4 | |
| 4 | Adjusting shaft fixed plate | FH1-PL521-029 | 1 | |
| 5 | Adjusting screw | FH1-PL521-028B | 1 | |
| 6 | Hand wheel | QRGX-3043125B10 | 1 | |
| 7 | nylon washer | 2FN2-101610 | 6 | |
| 8 | Socket Head Cap Screws | XNJW-M512 | 2 | |
| 9 | Socket Head Cap Screws | XNJW-M625 | 2 | |
| 10 | Adjusting shaft | FH1-PL521-025 | 2 | |
| 11 | Adjustment plate | FH1-PL521-024B | 1 | |
| 12 | Hex Nuts | XAXR-M12 | 2 | |
| 13 | Spring washer | 2FW0-M12 | 2 | |
| 14 | Socket Head Cap Screws | XNJW-M535 | 6 | |

Foot Stand

Foot Stand Parts List

| NO | DESCRIPTION | PART NO. | QTY. | NOTE |
|-----------|-------------------------------|-----------------|-------------|-------------|
| 1 | foot stand | FT1-PL501-007 | 1 | |
| 2 | conveyor base fixed set | FT1-PL501-002C | 4 | |
| 3 | spacing bar | FT1-PL501-003 | 2 | |
| 4 | foot stand adjustment pillar | FT1-PL501-004 | 2 | |
| 5 | tube coupler | FT1-PL501-005 | 2 | |
| 6 | tube coupler | FT1-PL501-006 | 2 | |
| 7 | Caster fixed plate | FT1-PL501-014 | 4 | |
| 8 | caster | 51RX-2R25 | 4 | |
| 9 | Screw nut | FT1-PL501-013B | 4 | |
| 10 | Socket Head Cap Screws | XNJW-M825 | 8 | |
| 11 | Socket Head Cap Screws | XNJW-M820 | 8 | |
| 12 | Socket Head Cap Screws | XNJW-M830 | 12 | |
| 13 | Screw nut | XNKW-M816 | 16 | |
| 14 | fixed bolt for foot stand | FT1-PL501-009 | 4 | |
| 15 | nut for foot stand | FT1-PL501-008 | 4 | |
| 16 | Base plate | FT1-PL521-001B | 1 | |
| 17 | slanted fixture B | FT1-PL521-005 | 1 | |
| 18 | slanted fixture A | FT1-PL521-002 | 1 | |
| 19 | active pillar for control box | FT1-PL521-004 | 1 | |
| 20 | fixed pillar for control box | FT1-PL521-003 | 1 | |
| 21 | Pan head screws Hexagon | XNAW-M825 | 8 | |
| 22 | Socket Head Cap Screw | XNJW-M845 | 2 | |
| 23 | Socket Head Cap Screw | XNJW-M855 | 2 | |
| 24 | Washer | XNQC-M8 | 2 | |
| 25 | Spring washer | 2FW0-M8 | 1 | |
| 26 | Screw Nut | XAXR-M8 | 2 | |
